About Greenlane Renewables

Greenlane Renewables is a pioneer in the rapidly growing renewable natural gas (“RNG”) industry. As a leading global provider of biogas upgrading systems, we are helping to clean up two of the largest and most difficult-to-decarbonize sectors of the global energy system: the natural gas grid and the commercial transportation sector. Our systems produce clean, low-carbon and carbon-negative RNG from organic waste sources such as landfills, wastewater treatment plants, dairy farms, and food waste streams. To the company’s knowledge, Greenlane is the only biogas upgrading company offering the three main technologies: waterwash, pressure swing adsorption, and membrane separation. Greenlane’s business has been built on over 30 years of industry experience, patented and proprietary technology, over 100 hydrogen sulfide treatment systems sold, and over 135 biogas upgrading systems sold into 19 countries, including some of the largest RNG production facilities in the world.
