About Greenlane Renewables

Greenlane is cleaning up two of the largest and most difficult-to-decarbonize sectors of the global energy system: the natural gas grid and the transportation sector. As a leading global provider of biogas upgrading systems, Greenlane’s solutions create clean, low-carbon renewable natural gas (RNG), suitable for injection into the natural gas grid and for direct use as vehicle fuel. Our systems, marketed and sold under the Greenlane Biogas™ brand, remove impurities and separate carbon dioxide from biomethane in the raw biogas created from organic waste at landfills, wastewater treatment plants, farms and food waste facilities. With multiple core technologies, more than 100 installations in 18 countries and counting, and 30+ years’ experience, Greenlane finds the right solution, whatever the specific project requirements. Whether we’re working with waste producers, gas utilities, or project developers, we’re doing more with biogas, helping to turn a low-value product into a high-value renewable resource.
